SEESAW EXPERIMENT

SUPPLIES
- A coin, marble, or small toy like a wooden block
- Tube-shaped item like a paper towel roll or flashlight
- Something flat, like a ruler or flat cardboard, to balance on top

TRY IT OUT!
1. Place your tube-shaped object down first.
2. Place your flat object over the tube to make a plus sign +.
3. Place a coin on one side of the flat object and see if it balances.
4. Try adding more objects to one side until the seesaw tips over!

LET'S TALK ABOUT IT!
- How do we balance the seesaw?
- What happens when we add more weight?
- Does the seesaw work better with objects that are lighter or heavier? Why?
